DETAILED ACTION

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael P. Dunnam on October 12, 2006.

The application has been amended as follows:

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: Figures 6 and 7 have been designated as "prior art" per the description of the drawings in the disclosure (see attached amended drawings). In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Drawings

Figures 6 and 7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the

Art Unit: 3746

applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The subject matter of the present invention differs from the teachings of the prior art in that the present invention comprises in combination with the other limitations of the first independent claim, an adjacent zone and a second chamber connected to a common pressure zone in the refrigerant circuit, wherein the second chamber is the outer chamber in a bellows type pressure sensor and, if a part of the through hole that is closer to the valve chamber than the separation portion and opens to the valve chamber forms the valve hole, the valve hole is the adjacent zone, and if the valve hole is located at the opposite side of the valve chamber with respect to the second chamber, the valve chamber is the adjacent zone. Furthermore, the subject matter of the present invention differs from the teachings of the prior art in that the present invention comprises in combination with the other limitations of the second independent claim, claim 9, a valve hole and a second chamber connected to a common pressure zone in the refrigerant circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
